## SUMMARY

Backend-focused developer with nearly 4 years of experience across Java/Spring and PHP/Laravel, currently on a production SaaS billing & payments platform. Recently migrated a live codebase to Java 25, Spring 7 and Hibernate 6, and build side projects on Spring Boot 4. Strong in Spring, JPA/Hibernate, REST APIs, batch pipelines, testing and CI/CD (Docker, Drone). Also teach Java and Spring Boot at a developer academy.

## SKILLS

- **Languages:** Java (8, 21, 25), PHP, SQL, JavaScript
- **Java & Spring:** Spring Boot 4, Spring 7, Spring Batch, Spring MVC, Hibernate 6 / JPA, REST APIs, Servlets/JSP
- **Databases:** MySQL, PostgreSQL/PostGIS, H2
- **Testing & CI/CD:** JUnit, Mockito, TestContainers, Drone CI, TeamCity
- **DevOps & Tools:** Docker, Ansible (basic), Git, Bitbucket, Maven, Ant, Jira, Postman
- **Other:** Laravel/Eloquent, Thymeleaf, SvelteKit, HTML/CSS; Agile/Scrum, code review, UML
- **Spoken:** Romanian (Native), English (Fluent)

## EXPERIENCE

- **Software Developer — Blue Billing (SaaS Billing & Payments)** GSD Software & Technology  
*Java, Spring Batch, Hibernate, MySQL* March 2025 – Present
  - Modernized the platform's core stack — migrated Hibernate (4 to 6), Spring (4 to 7) and Java 25 — resolving OptimisticLockException, detached-entity and ResultTransformer breakages across 500+ integration tests to keep the suite green through the upgrade.
  - Hardened NEM12 meter-data parsing in the billing pipeline: added invalid-NMI handling that continues processing instead of aborting whole files, line-number error reporting for malformed records, and recovery for quality-method and trailing-interval edge cases.
  - Diagnosed and fixed a production defect where direct-debit payments were wrongly marked FAILED during merchant deactivation; introduced a temporary-vs-permanent failure classification across four payment code paths so transient failures are retried instead of dropped, preventing lost high-value payments.
  - Delivered billing features in a 12-person Agile team: account-balance snapshots on collection events, multi-day payment-gateway file ingestion, and PDF bill generation with special-character handling in site names.
- **Technical Instructor** Software Academy — GSD  
*Java, Spring Boot, Databases* October 2025 – January 2026
  - Designed and delivered a 4-month developer program for 11 university students covering relational database design, OOP, Java core, Spring Boot and Hibernate, and full SDLC practices, with hands-on code reviews and mentored final projects.
- **Earlier Roles (Trainee → Junior Developer)** GSD Software & Technology  
*Java EE, PHP/Laravel* January 2023 – March 2025
  - Brambura Park (Laravel): built a park-entry ticketing system with real-time validation via Raspberry Pi and dynamic discount rules; containerized services with Docker, set up CI with Drone, and used Ansible for basic deployment automation, in a 3-person team.
  - Progressed from trainee to junior developer across Java EE and PHP/Laravel work — the Software Academy platform, a gym access/subscription app, and internal tooling — covering feature development, bug fixing and UML.

## PERSONAL PROJECTS

- **DrumBun — Ridesharing Platform (BlaBlaCar-style):** Spring Boot 4 backend and SvelteKit frontend with JWT authentication and PostgreSQL/PostGIS for geospatial driver-passenger matching.  
**Tech Stack:** Java, Spring Boot 4, SvelteKit, PostgreSQL, PostGIS, JWT.

## EDUCATION

- **Lucian Blaga University** Sibiu, Romania  
*Bachelor's Degree in Computer Science* 2018–2022
- **National College “Gib Mihaescu”** Valcea-Dragasani, Romania  
*High School Diploma, Mathematics and Computer Science* 2014–2018

## CERTIFICATIONS

- Oracle Certified Java SE 8 Associate (2023) • Laravel Certified Developer (2024)
